Year 7

In this year we reinforce and build on the knowledge and skills students have developed in the primary curriculum, and begin to extend the big ideas from the Primary curriculum into our core concepts. In Autumn 1, we use **multiple representations** to build **conceptual understanding** of number and number properties in students schemas. Moving through to Autumn 2, for many students this is the first time they will be introduced to algebra formally. In their Primary education they will have seen and understood the idea of a "missing number" or "unknown", and may have seen inequality signs, but tier 2 and tier 3 language like "co-efficient, variable, equation, inequality, expression, term, constant" will be new, so careful attention to modelling **mathematical language and notation**, and a focus on building **fluency** in basic algebra skills will be crucial. Moreover, a **conceptual understanding** of algebra as a generalised version of arithmetic will develop by building on the work done in Autumn 1. In Spring 1 and Spring 2 students learn about Geometry for the first time at Secondary. They build on their understanding of shape, space, and basic transformations to understand more formal ideas like the Cartesian plane. In this term students will properly encounter many of the of the higher-level core concepts like **mathematical reasoning** and **problem-solving**. In Summer 1, students build on the **conceptual understanding** that was built in Y7 Autumn 1 to develop **fluency** in operations on fractions. Finally, in Summer 2, students' **mathematical thinking** is focused on, as students are required to **think proportionally** in different scenarios, and with different **mathematical language and notation**.

Key questions	What number bases do we use on a daily basis? What is the relationship between multiplication and division? What is the difference between a factor and a multiple? What is BIDMAS and why is it important? <u>Unit 1 - Numbers and</u>	How do I calculate with negative numbers? How can I use algebra to generalise ideas? What is balancing and how do I use it to solve equations? <u>Unit 5 - Positive and</u>	How do I use a protractor to measure and draw angles? How can I use angle facts to find missing angles? How can I use mathematical equipment to construct triangles and quadrilaterals accurately? <u>Unit 7 - Angles</u>	How can I use co- ordinates to identify points on a grid? How can I use mathematical formulae to calculate area of different shapes? How can I transform shapes around a grid?	How do I use a Venn diagram to find the HCF and LCM of two or more numbers? How can I use the equivalence of fractions to convert between different forms? How can I use equivalence to add and subtract fractions with different denominators?	What is ratio and how do l represent it using a diagram? How can I use the Singapore bar model to solve problems involving ratio? What is the relationship between fractions, decimals and percentages? How can I convert a percentage into a decimal multiplier? <u>Unit 16 - Ratio</u>
knowledge/ concepts and skills	Interaction of the second system numerals Understanding of time as a different base system Understand how the decimal system works and how our numbers are formed Be able to use column method to add and subtract numbers including decimals. Unit 2 - Recognising patterns with multiplication Multiplication – introduction of the Napier's bones grid as an alternative to long multiplication including decimals. Division methods including decimals. Understanding the relationship between multiplication and division Unit 3 - Factors and multiples Being able to identify different types of numbers, such as factors, multiples, squares and primes. Finding highest common factor and lowest common multiple of two numbers by listing. Writing a number as a product of primes Unit 4 - Order of operations Know the importance of BIDMAS and be able to apply it to different calculations.	negative numbers. Performing the 4 operations with negative numbers. <u>Unit 6 - Introducing</u> sequences, expressions and equations Forming algebraic expressions. Simplifying algebraic expressions. Expanding single brackets. Solving one and two step equations	Estimating angles. Drawing angles using a protractor. Using basic angle fact such as angles in a triangle. Introduction to parallel and perpendicular lines. <u>Unit 8 - Classifying 2D shapes</u> Identifying quadrilaterals and their properties. Introduction to terms such as similar, congruent and symmetry. <u>Unit 9 - Constructing triangles and quadrilaterals</u> Drawing triangles and quadrilaterals using protractors and rulers.	Plotting and reading co- ordinates on a 2D plane. Finding midpoints between 2 co-ordinates. Drawing vertical and horizontal lines such as x=4 Unit 11 - Area of 2D <u>shapes</u> Calculating area of triangles, rectangles and squares. Developing into area of compound shapes. Unit 12 - Transforming 2D <u>figures</u> Identifying and performing transformations of 2D shape using rotation, reflection, translation and enlargement.	 <u>decomposition</u> Developing understanding of index notation. Using Venn diagrams to find the HCF and LCM of two numbers <u>Unit 14 – Equivalent</u> <u>Fractions</u> Identifying equivalent fractions, simplifying fractions and converting between mixed numbers and improper fractions. <u>Unit 15 – All operations</u> <u>acting on fractions</u> Adding/subtracting fractions with the same and different denominators, to include mixed numbers 	Simplifying ratios. Using the Singapore bar method to enable students to share in given ratios. <u>Unit 17 - Percentages</u> Exploring the link between fractions, decimals and percentages. Calculating percentages of amounts both using non- calculator methods and multipliers.
Assessment / Educational	Autumn 1 assessment	Autumn 2 assessment	Spring 1 assessment	Spring 2 assessment	Summer 1 assessment	End of Year 7 Assessment
VISIT Opportunities				Junior Maths Challenge		

Year 8

In year 8, we build on the strong foundations of **fluency** and **conceptual understanding** built in Y7 to explore some of the more advanced core concepts, and brand-new mathematical ideas. In Autumn 1, students explore sequences, and develop their **conceptual understanding** of algebra as a generalised arithmetic, by understanding how to algebraically describe the number sequences they encountered in their Primary education. Later in the half term, students build on the fluency in algebra they built in Y7 Autumn 2 to *form* and solve equations and inequalities, and in doing so build their **mathematical reasoning**, and **problem-solving** abilities. In Autumn 2, students' schemas around algebra are extended to include geometric interpretations of the equations they have been solving so far. This unit is also an application of the knowledge they have about the cartesian plane from Y7 Spring 2. In teaching students how to link these ideas, **mathematical language**, **representation and notation** will be crucial, as will a **conceptual understanding** of graphs as an infinity of individual coordinates. In Spring 1, students revisit the core concept of **proportional thinking** (from Y7 Summer 2), and apply the knowledge about graphs they have just learned in Y8 Autumn 2, to come to develop their **mathematical reasoning** in the arena of direct and inverse proportion. As with many units concerning ratio and proportion, fluency in the fundamental skills will be an important 'barrier to entry'. To support with this, the use of **multiple representations**, a focus on **mathematical language**, to build **conceptual understanding** will be important to teaching. In Spring 2, students build on the 2 half-terms of geometry they learned in Y7, deepening their in their lives. This is no longer covered in the Primary curriculum, and therefore, an extreme clarity in the **mathematical language** we introduce will be crucial to developing strong foundational understanding. Finally, in Summer 1 and Summer 2, students build on the 2 half-terms

Calculate the volume and surface area of cuboids, prisms (including cylinders) and composite shapes.
and skills	Generating terms for a sequence. Finding the nth term for a linear sequence Be able to identify a non-linear sequence <u>Unit 2 - Forming and</u> <u>solving equations</u> Solve equations with unknowns on both sides and fractions. Form an equation from a variety of different contexts <u>Unit 3 - Forming and</u> <u>solving inequalities</u> Form and solve inequalities with unknowns on both sides. Represent inequalities	Plot co-ordinates in 4 quadrants. Draw straight line graphs Identify the gradient and y-intercept of a line. Identify parallel lines. . <u>Unit 5 - Ratio,</u> Use ratio notation to describe a relationship. Solve problems using ratio. <u>Unit 6 - Real-life graphs</u> <u>and rate of change</u> Explore speed and density in context of proportional reasoning. Explore how graphs can be used to represent real life scenarios	Inverse proportion Represent proportional relationships using tables, graphs and algebraically. Solve proportion problems including inverse proportion. <u>Unit 8 - Accuracy and estimation</u> Round numbers to a required number of decimal places/decimal places. Estimate sums by rounding. Understanding error intervals and truncation	Be able to construct and read a variety of different charts such as bar charts, pictograms and line graphs. Be able to calculate the mean, median and mode from a variety of different contexts, including raw data, charts and discrete tables. Understand the difference between discrete and continuous data. <u>Unit 10 - Scatter graphs</u> Construct a scatter graph and understand it allows us to see the relationship between	 parallel lines and polygons Review of Y7 angle facts work, including parallel line angles Be able to calculate the interior angle sum of a polygon given the number of sides. Be able to use the sum of interior and exterior angles to be able to solve problems. <u>Unit 12 - Bearings</u> Be able to draw and read bearings using the standard conventions. Solve problems involving bearings using angle facts. 	 <u>composite shapes</u> Know and use the formulas for area and circumference of a circle Be able to apply understanding of circle formulae to part circles and compound shapes involving circles. <u>Unit 14 - Volume and surface area of prisms</u> Be able to name different prisms and use the language associated with 3D shapes. Calculate the volume and surface area of cuboids, prisms (including cylinders) and composite shapes.
and skills	Generating terms for a sequence. Assessment &	Autumn 1 assessment	Autumn 2 assessment	Spring 1 assessment	Spring 2 assessment	Summer 1 assessment	End of Year 8
Educational Visit						Assessment
Opportunities				Junior Maths Challenge		

In year 9, students have spent 2 years developing a **conceptual understanding** of many of the central ideas in number, algebra, and ratio, as well as **fluency** in many of the skills necessary to achieve at KS4. This year, this knowledge and these skills are utilised to explore more advanced and 'exotic' areas of Mathematics, as students prepare to begin studying the formal Mathematics of GCSE Maths next year. In Autumn 1, students are exposed to a variety of curriculum areas which cement their **fluency** and **conceptual understanding** in preparation for the more advanced ideas in the rest of Y9. In Autumn 2, students' understanding of algebra is deepened and extended as they reason with purely abstract ideas, including changing the subject, and algebraic factorisation. In this half term, **mathematical thinking** and **mathematical reasoning** feature prominently. These algebraic ideas are built on in Spring 2, when graphs are studied as an alternative **representation** of the equations and inequalities they have come to manipulate **fluently**. In Spring 1, and Summer 1, students' build on the large maps of geometry knowledge they have built over their education to encounter more nuanced **problem-solving** in spring 1, including forming and solving equations, before brand new ideas are introduced in Trigonometry. Students need to **reason mathematically** and have a **fluent, conceptual understanding** of many previous areas of the curriculum to access this well – including congruence and similarity from Y9 Spring 1, equations and algebraic manipulation from Y9 Autumn 2, and on all occasions before that as their algebraic skills developed, and number skills from across Y7 and Y8. Finally, in Summer 2, students' meet mathematical Probability for the first time. They build on their understanding of data from Y8 Spring 2 to develop a **conceptual understanding** of the difference between experimental and theoretical probability, and develop **fluency** in using the different tables and graphs which **represent** the data.

 Y10 (Foundation)

 In Y10, students enter the first year of formal study for their GCSE. In many schools, students have been tiered into foundation or higher according to how well they fared with the more advanced topics in Y9.

 For students on both tiers, but particularly those on the foundation tier, core knowledge and skills are revisited, to ensure that students have the fluency and conceptual understanding necessary to access the entire KS4 curriculum. Having revisited knowledge and skills from KS3, students are equipped to fully explore the core concepts of mathematical thinking, mathematical reasoning, and problem-solving. This is done in every half term, as students build up to answering exam-style questions, and teachers model mathematical language and notation which is suitably formal for KS4.

Assessment & Educational Visit	Assessment 1	Intermediate maths challenge	Assessment 2	EOY 10 Assessment

Year 11 (Foundation)

In our students' final year of study, we begin by drawing on all of the knowledge and skills they have developed over their 4 years with us to introduce some the most challenging GCSE content, including vectors, construction and loci, and geometric reasoning at foundation tier. Students are now refining and fully developing their **problem-solving** and **mathematical reasoning** skills in preparation for their exam. In the periods of revision that are scheduled, teachers identify gaps in knowledge and underdeveloped skills in their students, and revisit elements of the KS4 curriculum accordingly. Often, these areas of weakness will not be in **fluency**, but in students' ability to **reason mathematically** with the knowledge they have, or **problem-solve** in unseen situations. They will use this time to hone these core concepts fully.

Key knowledge/conce pts and skills	Unit 25 - Vectors Use column vector notation and be able to add/subtract vectors Solve problems with vectors using ratios and fractions Prove that vectors are co-linear Unit 26 - Geometric reasoning Be able to calculate interior and exterior angles of polygons Unit 27 - Circle theorems Use circle theorems to derive proofs Understand the conventions involved in bearings Use parallel line angle facts to reason with bearings Use parallel line angle facts to reason with bearings Use parallel line angle facts to reason with bearings Event the conventions and SAS, ASA, SSS and RHS rules Prove that two shapes are congruent Be able to use a scale factor to convert between lengths, area and volumes in similar shapes	Unit 30 - Linear graphs Be able to find the equation of a line from two points Be able to find lines that are parallel or perpendicular to a line and that pass through a specified point Unit 31 - Inequalities Solve linear inequalities Identify regions indicated by one or more inequality Solve quadratic inequalities Identify a variety of different graphs including quadratic, cubic, reciprocal and exponential graphs Identify the equation of circle and understand how to find the radius and centre point from the equation Plot and interpret distance-time and velocity-time graphs Interpreting rate of change from a graph Unit 33 - Trigonometric graphs	 Unit 34 - Algebraic proof and reasoning Be able to represent odd, even and consecutive integers algebraically Derive proofs algebraically Unit 35 - Recurrence relations Use an iterative relationship to generate a solution Be able to rearrange a quadratic/cubic equation to derive an iteration formula Unit 36 - Functions Apply function notation Be able to calculate composite functions Be able to find an inverse function Unit 37 - Transformation of graphs Be able to transform graphs given an equation using standard function notation Unit 38 - Further graphs Interpret the meaning of the gradient of a graph in terms of a rate of change 	Bespoke revision lessons for each class based on previous mock exams Exam practise using past exam papers
Key knowledge/conce pts and skills	Unit 25 - Vectors Use column vector notation and be able to add/subtract vectors Solve problems with vectors using ratios and fractions Prove that vectors are co-linear Unit 26 - Geometric reasoning Be able to calculate interior and exterior angles of polygons Unit 27 - Circle theorems Use circle theorems to derive proofs Understand the conventions involved in bearings Use parallel line angle facts to reason with bearings Use parallel line angle facts to reason with bearings Use parallel line angle facts to reason with bearings Edentify congruence and <u>similarity</u> Identify congruency using the SAS, ASA, SSS and RHS rules Prove that two shapes are congruent Be able to use a scale factor to convert between lengths, area and volumes in similar shapes	Unit 30 - Linear graphs Be able to find the equation of a line from two points Be able to find lines that are parallel or perpendicular to a line and that pass through a specified point Unit 31 - Inequalities Solve linear inequalities Identify regions indicated by one or more inequality Solve quadratic inequalities Identify a variety of different graphs including quadratic, cubic, reciprocal and exponential graphs Identify the equation of circle and understand how to find the radius and centre point from the equation Plot and interpret distance-time and velocity-time graphs Interpreting rate of change from a graph Unit 33 - Trigonometric graphs Identify the graphs of y=sinx,	 Unit 34 - Algebraic proof and reasoning Be able to represent odd, even and consecutive integers algebraically Derive proofs algebraically Unit 35 - Recurrence relations Use an iterative relationship to generate a solution Be able to rearrange a quadratic/cubic equation to derive an iteration formula Unit 36 - Functions Apply function notation Be able to calculate composite functions Be able to find an inverse function Unit 37 - Transformation of graphs Be able to transform graphs given an equation using standard function notation Unit 38 - Further graphs Interpret the meaning of the gradient of a graph in terms of a rate of change 	Bespoke revision lessons for each class based on previous mock exams Exam practise using past exam papers

	Construct angle bisectors and	y=cosx and y=tanx		
	perpendicular bisectors using a	Be able to recall exact		
	compass	trigonometric values		
	Construct loci to solve problems	Be able to use the trigonometric		
		graphs to find values		
Assessment &		Y11 mocks	Y11 assessment
